

PMC Warehouse System — User Manual

The web console (desktop) is covered in full detail for office/management use; the PDA app used by floor staff is summarized, as workers are trained on the device directly.

PDA App (Overview)

Frequently Asked Questions

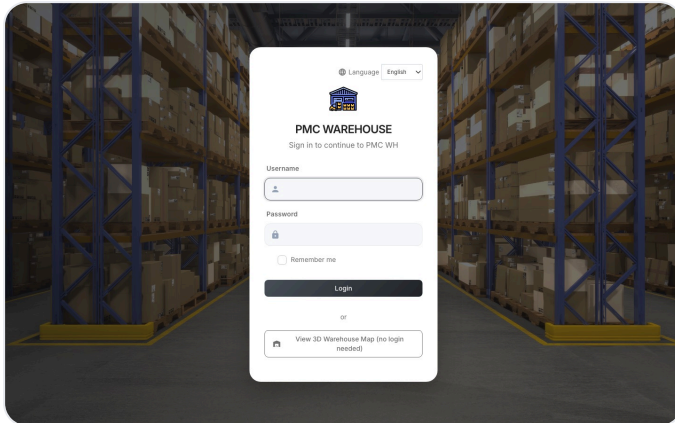

Login & Account Roles

The web console and the PDA app share the same account, issued by an administrator — there is no self-service sign-up.

- 1 Open the web app at the internal address you were given, or open the **PMC WAREHOUSE** app on the handheld scanner (PDA).
- 2 Enter your **Username** and **Password**, then tap **Login**.
- 3 An incorrect username/password shows "Tên đăng nhập hoặc mật khẩu không đúng." — contact an administrator to have it reset.

Two roles: **Member** handles day-to-day operations and can only sign in on the PDA app.

Admin additionally gets Edit/Delete/Dispose, Excel import, and user administration, on both web and PDA.

Web login screen

WEB

Web Console — Desktop

For warehouse managers and office staff: full data access, search, reports, and the administrative tasks the PDA app does not cover.

A1. PMC Materials Database

MENU: MATERIALS

The master table of every material ever entered into the system — the single most-used screen on the web side.

- **Search:** pick a column in the **Search by** dropdown (Barcode, Dev, PO, Supplier, Season, Stage...) and type into **Search text**. Up to three search conditions can be combined at once.
- **Filter further by** **Status**, an **Arrival date** range, or the **Over 90 days** checkbox.
- **Import** — bulk-load materials from Excel (download the template first to keep columns aligned). Rows that already include a matching Rack No. are shelved automatically, no manual scan required.
- **Export Excel** — exports exactly what the current filter shows, including every column plus live status/balance.
- The list shows **10 rows per page by default** — use the **Show** dropdown at the bottom to view more.

BALANCE COLOR

MEANING

● Green

Balance = arrival quantity — nothing issued yet

● Yellow

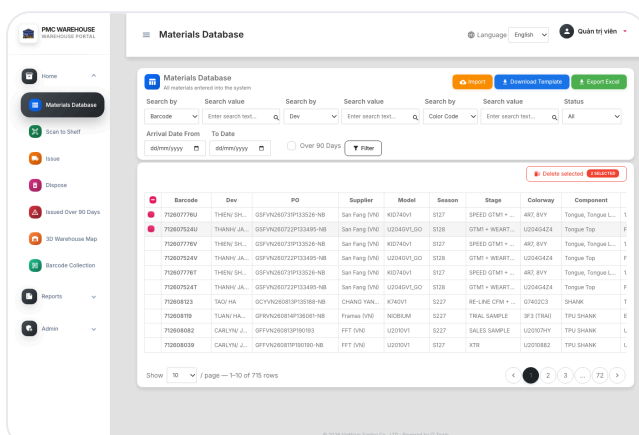

Partially issued — some balance remains

● Red

Balance = 0 (fully issued, or still awaiting shelving)

The **Action** column (Admin only) has two buttons: view detail + movement history · edit descriptive fields. Double-clicking any row also opens the detail popup.

Deleting a material is the only way to delete, done via the checkbox column at the left of the table (Admin only): tick one or more rows (or the header checkbox to select every row on the current page), then tap **Delete selected** above the table. This is a permanent, hard delete — the record and its entire movement history are removed from the database and **cannot be recovered**.

Materials Database — checkbox column + "Delete selected"

A2. Shelf Stock

MENU: MATERIALS

Assign newly-received material to a shelf slot from the staging area, or receive previously- issued material back onto a shelf — both flows live on this one screen.

- 1 Scan or type the barcode into the **Scan barcode** field and press Enter.
- 2 For **newly-received** material (not yet shelved): pick **Rack** → **Level** , then tap **Shelve**.
- 3 For material **awaiting return** (previously issued, partially or fully): the outstanding quantity is pre-filled — enter the quantity being returned and confirm. If the material never left its shelf, the original location is kept automatically.

The "Needs shelving" list below is split into two tabs — **New arrivals** and **Returns** — each row also has its own action button as an alternative to scanning, for use at a desk without a scanner.

Shelve Stock — New arrivals / Returns tabs

A3. Issue Stock

MENU: MATERIALS

Issue material out to a DEV team or workshop, deducting it from stock.

- 1 Scan or type the barcode of the material to issue.
- 2 Choose the **Recipient** and enter the **Quantity to issue** (cannot exceed the current balance).
- 3 Confirm — issuing everything moves the status to **Fully issued**; issuing part of it moves it to **Partially issued**.

Issue Stock screen

A4. Dispose Material

MENU: MATERIALS · ADMIN

Retire material that can no longer be used — balance drops to zero, and the record stays visible for 30 days before it auto-hides.

- Scan/type the barcode, or tap **Dispose** directly on the row in the "Disposable" list.
- Confirm in the dialog — **this cannot be undone**.

Note: Dispose is not the same as Delete. "Delete" (checkbox selection on the Materials Database screen, A1) **permanently removes** the record — including its movement history — from the database, used to correct bad data entry; it cannot be recovered. "Dispose" is a real warehouse event (damaged/unusable stock): it only zeroes the balance and keeps a 30-day history before auto-hiding.

Dispose Material screen

A5. Issues Overdue 90+ Days

MENU: MATERIALS · ADMIN

Material issued out (partially or fully) more than 90 days ago with no return yet — a prompt to verify the real situation with the recipient.

- 1 Contact the recipient and check the real situation: if the material is still there, leave the row as-is (they will return it via Shelf Stock).
- 2 If it has all been used and there is nothing left to return, select the row (or select all for a bulk pass) and tap **Delete selected**.

Issue Report screen

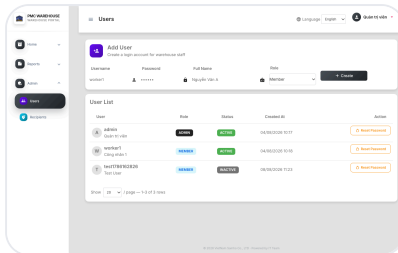

A8. Administration

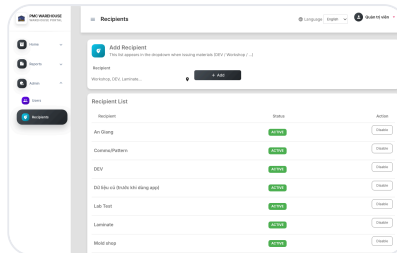

MENU: ADMIN · ADMIN

Manage login accounts and the recipients list — this menu is only visible to Admin accounts.

- **Users:** create new accounts, or reset a forgotten password back to the default.
- **Recipients:** add new recipients (DEV teams, workshops...), or turn one off — a disabled recipient no longer appears in the picker when issuing stock.

User management

Recipient management

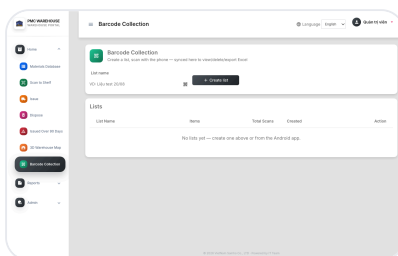

A9. Barcode Collection

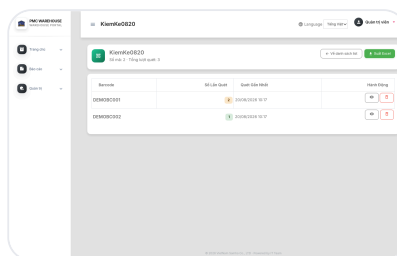

NEW · MENU: BARCODE COLLECTION

New feature: a standalone scan-and-tally tool, fully decoupled from the core warehouse workflow — it never touches real stock or balances.

- Create a new list (on web or the Android app) with any name.
- Scan on the PDA — each code **saves the instant it's scanned**; re-scanning the same code just increments its count.
- View, delete entries, or export to Excel from the web (two columns: Barcode + Scan count).

List of Barcode Collection lists

List detail — synced live from the phone

Mobile App

PDA App (Handheld Scanner)

Warehouse floor staff work directly on the PDA — the same data as the web console, in a stripped-down interface built for continuous scanning. Staff receive hands-on training on the device itself during rollout, so this manual only summarizes what the app does rather than walking through every screen the way the Web section above does.

Shelve Stock

Assign new / returned material to a shelf slot

Issue Stock

Issue to a DEV/Workshop, even before shelving

Return

Bring previously-issued material back into stock

Dispose

Retire material no longer usable

Search

Instant lookup of a single barcode

Shelf Browser

View stock by physical shelf location

Today's Log

Warehouse-wide activity feed for the day

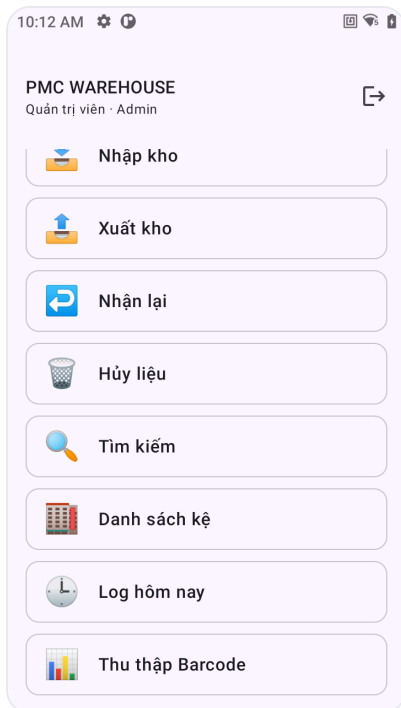

Barcode Collection

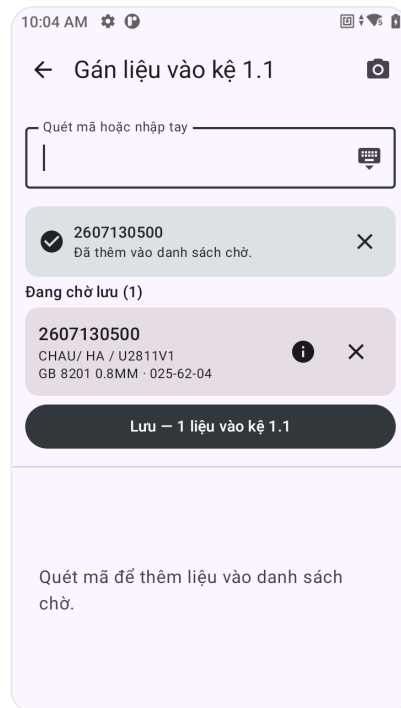

Standalone scan-and-tally tool *(new)*

Input comes from the hardware trigger (primary) or the camera (fallback). Every batch-scan screen asks for confirmation before exiting if there's unsaved work. A Wi-Fi connection is required at all times — the app has no offline mode.

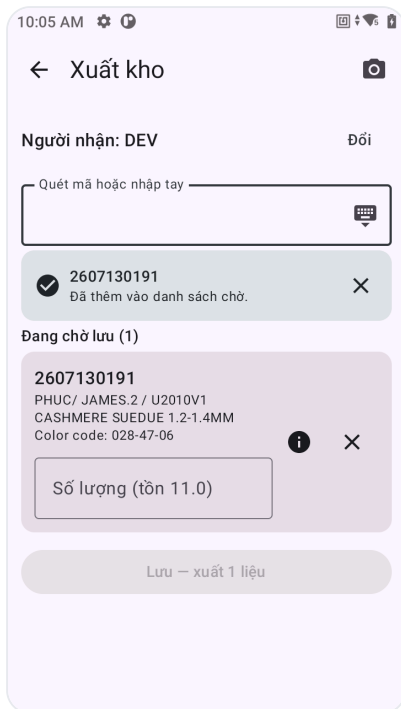

Screens on the device (Vietnamese UI — the app has not been localized to English, since floor staff are Vietnamese-speaking):

Main menu

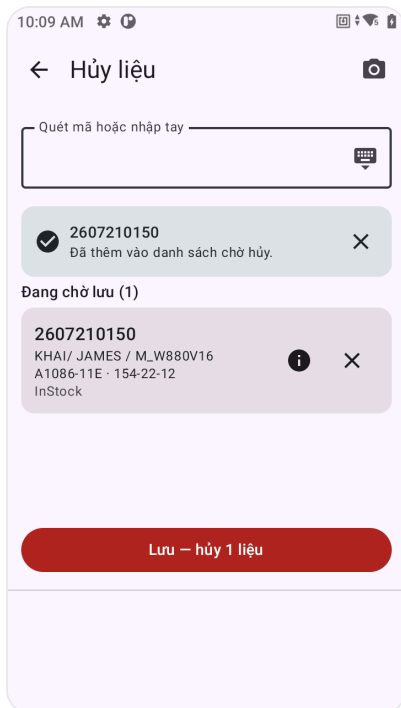

Shelve Stock — scan queue

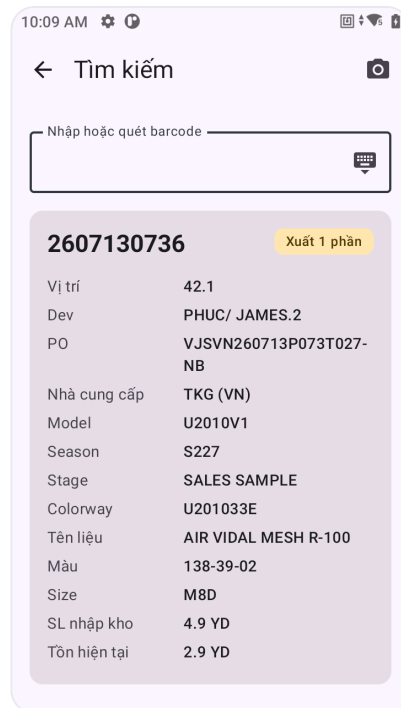

Issue Stock — scan queue

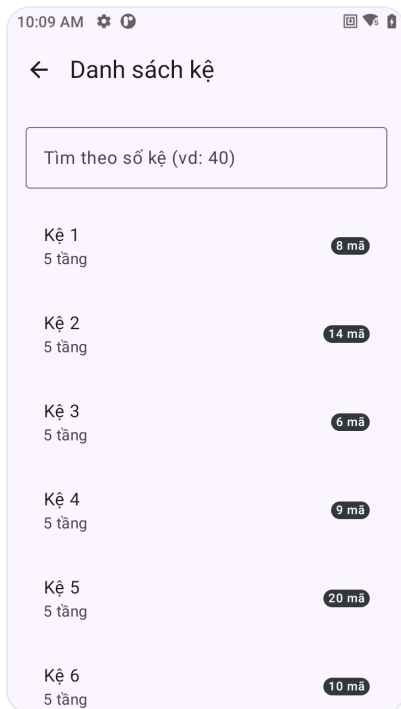

Return — outstanding qty pre-filled

Dispose — scan queue

Search — instant lookup

Shelf Browser

Barcode Collection — duplicate-scan warning

Frequently Asked Questions

Forgot my password — what now?

It cannot be self-reset — ask an **Admin** to open **Admin → Users** on the web, select your account, and tap **Reset password**.

What are the possible material statuses?

STATUS	MEANING
Awaiting shelving	Just imported/received, not yet assigned to a shelf (Staging)
In stock	Shelved, untouched, nothing issued yet (InStock)
Partially issued	Some quantity issued, balance remains (PartiallyIssued)
Fully issued	No longer in stock (IssuedOut)
Disposed	Retired, kept 30 days then auto-hidden (Disposed)

What is the difference between "Delete" and "Dispose"?

Delete (checkbox selection on the Materials Database screen, Admin only) **permanently removes** the record from the database — including its movement history — used to correct bad data entry.

Dispose is a genuine warehouse event: balance goes to zero and it keeps a 30-day log before auto-hiding. Neither can be undone once confirmed, but Delete erases the row entirely while Dispose keeps a trace for a month.

Where do I switch the web app to English?

Top-right corner of the web app, next to the account name, there is a **Language** selector.

PMC Warehouse — internal documentation, kept in sync with the running system.

Web and PDA share one database — an action on either side is reflected instantly on the other.
